

Professional Services

Spanning from technology deployments to comprehensive ecosystem design, implementation, and management, GlobalXperts has what you need.

Professional Services

GlobalXperts' Professional Services model follows a Plan, Build, and Operate framework, aligning with industry best practices that seamlessly scale to project scopes. With global experience in both on-premises and cloud environments, we assist customers with multi-vendor solutions. Our engineers, leveraging over two thousand technical resources in twenty-five countries, have successfully managed projects ranging from small-scale applications to Fortune 100 international rollouts.

Our team comprises technology professionals with expertise in strategic consulting, solution architecture, program management, and knowledge of business processes. Clients can leverage GlobalXperts Pro Services for various infrastructure needs, such as Unified Communications upgrades, contact center support, security assessments, data center design/installation, or cloud solutions.

Security

Our certified professional services team assesses your unique risks, develops a defense plan, and implements leading security technologies tailored to your organization.
